Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 – 2, 4 – 7, 9 – 15 and 17 – 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,278,898 (Cambray et al.) in view of U.S. Patent No. 6,330,326 (Whitt) and U.S. Patent No. 6,173,052 (Brady)

With respect to claims 7,15 and 21 – 22, Cambray et al teach a hold queue prioritizing system, comprising; an automatic telephone system (Col. 1, lines 43 - 44), a call receiver/director (12), a customer database (Col. 2, line 57), a means for obtaining identifying information (note call ID and indicia of Fig 1), at least one hold queue (18) connected to call receiver/director (12) (see Fig. 1), a plurality of call agent terminals (16) coupled to the automated phone system (Fig. 1) and a hold queue prioritizer/call retriever (26).

Therefore, Cambray et al. teach the claimed device except for a means responsive to obtained caller identifying information, for searching a customer database to identify customer data records corresponding to the caller identifying information for each of said plurality of connected calls, and retrieving a call prioritizing information from each of the customer databases. In addition, Cambray et al. does not teach displaying a list of call records and identifying

Art Unit: 2642

information in a call queue, and thereby allowing an agent to manually select a call from the call list.

First, Whitt teaches such limitations (see Col. 4, lines 49 – 52). It would have been obvious to have incorporated such limitations as taught by Whitt into the Cambray et al. device as such would only entail the substitution of one prioritizing indicia for another. Note that the call history of the current caller is used to predicting how long the current caller will wait.

Second, Brady teaches displaying a list of call records and identifying information in a call queue, and thereby allowing an agent to manually select a call from the call list. See Abstract, Col. 1, line 55 – Col. 2, line 60. It would have been obvious to one of ordinary skill to have incorporated such a means for displaying a list of call records and identifying information in a call queue, and thereby allowing an agent to manually select a call from the call list, as taught by Brady into the Cambray et al./Whitt device in order to make the call center more efficient.

With respect to claims 9 and 18, note raw customer information retrieved (note Col. 3, lines 8 - 11 of Cambray et al.).

With respect to claim 10, note call priority score (Claim 2 of Cambray et al.).

With respect to claims 11 and 19, note absolute priority (FIFO, Col. 2, lines 11 – 16 of Cambray et al.).

With respect to claim 12, note Col. 2, lines 5 - 8 and Col. 5, lines 15 - 31.

Application/Control Number: 09/203,965

Art Unit: 2642

With respect to claim 13, Cambray et al does not teach ANI but does teach Call ID. Note the use of ANI (among others) by Whitt (Col. 4, lines 39 – 45). It would have been obvious to one of ordinary skill in the art to have incorporated such use of ANI as taught by Whitt into the Cambray et al. device as such would only entail the substitution of one well known identification means for another.

With respect to claim 14, note Col. 2, line 60 of Cambray et al.

With respect to claim 17, note Col. 2, line 65 - Col. 3, line 4 of Cambray et al.

With respect to claims 1 – 6 and 20, such method claims would be inherent from the discussion above.

Response to Arguments

Applicant's arguments with respect to claims 1 - 2, 4 - 7, 9 - 15 and 17 - 22 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- U.S. Patent No. 6,088,444 (Walker et al.) note Col. 3, line 64 Col. 4, line 5.
 - U.S. Patent No.6, 606, 668 (McLampy et al.) note Col. 9, line 20;
- U.S. Patent Application No. 2003/0191676 (Templeton) note paragraph 0011; and
